

Subject: Guidelines & Expectations for Prospective MPhil Students

Dear Prospective MPhil Students,

Thank you for considering joining my research group. I am committed to fostering a supportive and productive environment. Below are some key expectations and norms to ensure a mutually gratifying experience for all involved:

1. **Personal Mentorship:** I prioritize a close supervisor-student relationship to provide tailored guidance and substantial support. Consequently, I supervise a limited number of students each year, ensuring that each receives the attention necessary for their personal and academic growth.
2. **Research Focus:** My primary interest currently lies in advancing research in our field. You are expected to dedicate most of your time to this endeavor. However, those with strong programming/engineering skills who can develop applications related to our projects are also welcome.
3. **Research Outputs:** Before graduation, I expect all students to produce significant research outputs, such as published papers and deploying running machine learning systems. Please consider your readiness and commitment to achieve these goals before applying to join our group.
4. **Mutual Understanding:** Establishing a shared understanding and common interests is crucial. I encourage you to engage with our ongoing projects before formally requesting my supervision. This helps ensure our research interests and work ethics align.

Your thoughtful consideration of these points is appreciated. I look forward to the possibility of collaborating with those who are dedicated to advancing our collective knowledge through rigorous research.
